Home task (Footbal points)

Our football team finished the championship. The result of each match look like "x:y". Results of all matches are recorded in the array.

For example: ["3:1", "2:2", "0:1", ...]

Write a function that takes such list and counts the points of our team in the championship. Rules for counting points for each match:

if x>y - 3 points
if x<y - 0 point
if x=y - 1 point
Notes:

there are 10 matches in the championship
0 <= x <= 4
0 <= y <= 4

Note: additional points for using reduce

Remove String Spaces

Simple, remove the spaces from the string, then return the resultant string.
